

LithoGold

We have received orders for over \$1.0 million for deliveries in the next quarter including two LithoGolds and several veterinary or research devices. The most prestigious new customer is the University Of Indiana with Dr. James Lingeman. After years of research they selected the LithoGold after it was proven to be the safest and most effective device.

Cardiology Update

We have reached agreement with a new cardiology affiliate, NonVasiv GmbH. They are our former research team that developed the DermaGold and they remain substantial shareholders. They have received grants from the Austrian Government that will allow them to start clinical trials for Ischemic heart disease later this year. The studies are funded by the government and could be used for approvals in Europe and lay the foundation for clinical studies in the US. We are aggressively seeking a strategic partner to move this project forward. The Cardiology Folder in Google Drive has all of our research and I hope you get the chance to review it to see how far we have come. It was also learned at the ISMST that the European Union is supporting RCT's for the combination of stem cell therapy and shockwaves after exciting preliminary studies were completed and analyzed.

Stem Cell Initiative

We have approached several prestigious international stem cell centers and proposed a dual approach for brain and spine injury patients. Our proven ability to produce stem cell attractants to the pathologic site and the centers ability to flood the patient with up to 1 billion stem cells looks like an ideal combination. We have even seen the possibilities as we work closely with a patient who has received both therapies with exciting results. We hope to announce our partner in the next newsletter.

New TRT Website

Please check out the new website www.trtlc.com. There you can access the latest marketing material, news, and research. If there are ever any questions, please feel free to call John Warlick at 404 402 6844. This should be an exciting 12 months! Thank you for your continued patience and support

Patent Update

DN0120 - Apparatus and Method for Cellular Extract Enhancement - was granted 07/15/2014 US 8778414 . This patent relates to equipment and methods to enhance the amount or percentage of extractable material from cellular plant products such as coffee beans, tea leaves, wheat, barley, oats, hops, nuts, more particularly to the use of acoustic shock waves to facilitate extract yields. It is believed that foods, when treated with shock-waves, produce more flavonoids and nutrients as the cell walls become permeable. As an example, the typical coffee bean only extracts 20% or less of its flavonoids when ground and steeped at Starbucks. If anyone has contacts with the big boy food processors, please let us know who to call.

DN0229 - Improved Acoustic Shock Wave Therapeutic Methods - was filed 02/13/2014. A method of treating a patient having a nerve injury or spinal cord injury or spinal cord lesions, or disease or any pathology that has compromised an autonomic nervous system of a patient to stimulate regeneration or reactivation of the autonomic nervous system. This patent was based on our amazing experiences with the patients from Project Walk Atlanta. SoftWaves seem to stimulate the autonomic nervous system even years after an injury. Our first patient totally recovered his lung function within weeks even 7 years after a complete spinal injury that prevented him from coughing, sneezing or taking a deep breath.

Invitation to www.googledrive.com Site

We have spent many hours compiling most of our past publications, presentations, posters, videos and white papers in a new Google Drive site. There are more than 50 peer reviewed publications. Most importantly they are sorted by pathology, from basic research to urology. If anyone would like access to these sites send me your email address and I can invite you to join. One aggravation is that if you use your email address for your apple products you will need another email address to access the site. Of particular interest are our testimonials from Project Walk Atlanta. We have the same results as Dr. Bush from Germany and we have submitted the study design for IRB approval.

This newsletter is not an offer to sell or solicitation of an offer to buy TRT securities. Investment decisions should be based on the risks and disclosures presented in TRT's Confidential Memorandum. A NEWSLETTER FOR EQUITY HOLDERS OF TRT

Vol. 32 | September 2014

ISMST—Milan, Italy

TRT participated in the recent ISMST meeting in Milan with our manufacturing partner MTS. There were 64 presentations from around the globe and the quality easily surpassed prior conferences. There were more than 200 participants with every continent represented. The most amazing presentations were from Dr. Lohse-Bush, the Director of a rehabilitation hospital in Bad-Krozingen, Germany. Unbeknownst to anyone involved with the ISMST, Dr. Bush has been treating brain and spinal injury patients at his clinic for over 20 years. The German healthcare system, when it comes to patients with disabilities is far superior to our system. Every patient is entitled to 3 weeks of treatment every quarter at a spa/clinic with access to every specialty. Dr Bush applied shockwaves directly to the spine and cranium with amazing results. He presented spine injury patients after one year who had a typical recovery from ASIAA score to ASIAC. He also reports that the sooner a patient is treated after an injury the better the outcome. Please go to our new website www.trtllc.com to see our white paper on this subject. Dr. Bush was also able to treat his brother, a long time, bed ridden Parkinson's patient, and have a complete reversal of symptoms after only 5 weeks. Most amazingly, at their rehab hospital they also treat long term coma patients. They were able to reverse the coma in 4 of 5 cases and remove all feeding and breathing tubes. We have approached numerous foundations in the US to share these experiences and hope to solicit their support in research. Again, if anyone knows important people in these specialties, please let us know who to contact.

Amazing research was presented, especially from Dr. Wang's Taiwan group detailing the precise biologic response that shock/softwaves trigger including stem cell attractants and growth factors. All of the abstracts should be available soon with a link from our website.

Most importantly, based on Dr. Bush and our clinical success with spinal patients and the proven safety of the technology, the Austrian Workman's Compensation System has agreed to underwrite Randomized Controlled Studies later this year for spinal patients. This protocol could be used for approval in Europe and the United States and will exclusively use our technology.
